## **TranslucentTB 2018.2 Full Version**

TranslucentTB is a lightweight and straightforward piece of software that allows you to customize the look of your Windows 10 computer's taskbar with the help of a set of stylish transparency and translucency effects. No installation, no user interface, just a small menu and an even smaller tray icon To start off with, we will point out that this little app does not require any type of installation. To start taking advantage of what it can offer, simply download it, unzip its package and run it from its default executable, just like any other app. Once launched, TranslucentTB smoothly integrates with the taskbar and makes its presence noticed via a tiny icon. This is a good time to point out that that the application does not feature a user interface per se. However, it does feature an ultra-minimalist taskbar menu that allows you to provide your computer's taskbar with either full transparency or with a blur effect. Transparent, translucent or colored taskbar, with just a few mouse clicks By reading the provided usage.md file, you will find out that these are not all the features this app provides. In fact, you can modify its behavior and apply various colors to your computer's taskbar with a bit of basic command line knowledge. If you want things to go back to normal, simply close the tiny app from its taskbar menu and then activate the Start menu and that's that. It is also worth mentioning that TranslucentTB comes with support for multiple monitors. Unfortunately, there's still one issue that should be addressed, specifically, the effects do not apply to the Cortana search box. TranslucentTB app TranslucentTB app One of the smallest apps, responsible for one of the biggest visual changes to your computer's OS All in all, TranslucentTB is a somewhat charismatic application since it allows you to change the (pragmatic) appearance of the most iconic and important UI components of Windows. Having said that, we wouldn't be too surprised if it would quickly pick up quite a bit of following in the period to come. Since the app was even more simplistic when it was first presented in a Reddit post by the developer, it would be very interesting to see how it evolves from here onward. Options and toggles for accurately customizing the translucency percentage, a color-picker and a launch-at-system-startup feature are just some of the possible improvements that would make this little app even more desirable than it already is. Trans

### **What's New in the?**

TRANSLUCENTTB is a Windows tray application. The purpose of the app is to customize the Windows tray-area (window-frame area), a few mouse-clicks away from the start menu, where the start menu and the taskbar are present. Not all the features implemented in the app are visible in the tray menu itself. For example, if you uncheck the "Arrow-appearing menu" option, the menu stays visible on the tray area. However, the options available on the menu are limited to the following: full-transparent, translucent or colored tray-area; transparent start menu, transparent taskbar or translucent taskbar; transparent start menu-popup-menu; Windows Aero effects; customize the active color of the taskbar; change the opacity of the taskbar (F11/F12 key); restart the computer. Requires: SVN revision -- Version: 1.0.717 This app creates a tiny menu with a few buttons, a little icon and a trifle-sized tray icon, allowing you to modify the look of your Windows 10 computer's taskbar. So when you open it, you'll see an app with a tabbed menu at the top of the screen, which contains four tabs, each of them enabling you to manage your taskbar color, your taskbar transparency and your taskbar blur level. As for the tray icon itself, it is a fairly simple little item, but it's well-sized and well-designed, and it sits nicely on the bottom right corner of your taskbar. So what can you do with it? Well, to start things off, you can modify the taskbar look of your Windows 10 PC with the help of a set of transparent and translucent effects that can be applied to the taskbar frame. As for the app itself, it is a pretty neat little thing that doesn't require any install. Simply open it up, unzip its contents, launch the app's exe and then enjoy your taskbar's slightly more modern look. Now, this neat little app does not necessarily offer all the features that you can find on the Start menu settings panel, and for a few of them you do need to execute a few lines of command-line instructions. To start off with, you can't customize the Cortana search box, and you can only modify the opacity of
